

## Custom 33ft steel sailing yacht

This 33-foot steel sailing yacht, custom-built in Holland in 1978, is a sturdy and reliable vessel, perfect for both seasoned sailors and enthusiasts who appreciate the durability of steel construction. With 3+2 beds, it comfortably accommodates up to five people, featuring a double bed in the front, a single in the back, and a sofa that can fit one or two. The boat is powered by a Yanmar 3YM30 engine, which has been meticulously maintained with only 1600 hours of use, ensuring strong and reliable performance. Recently, the hull underwent a thorough sandblasting, inspection, and received four fresh layers of epoxy and antifouling, making it well-prepped for the open water.

Equipped with a wide range of essential and comfort-enhancing features, the yacht has a 1200W Tigress windlass, 200AH lithium batteries, and solar arrays for consistent energy supply. The 300-liter water tank, water heater, and well-appointed kitchen ensure longer voyages are easily manageable. The boat also includes a chart plotter, depth gauge, wind instruments, and various safety gear like an emergency life raft and six fenders. However, the Genoa sail may need replacing soon, and occasional welding will be required, making it an ideal choice for someone comfortable working with steel.
