

GibSea 402 master 1990

It benefited from an antifouling renovation in 2021, as well as the installation of a new battery bank, charging of electric cables and inverter and four renogy 175w solar panels. Complete kitchen equipment in terms of new crockery.

There is a raymarine radar and a radar that remains to be installed. In short, about $20,000 of investment in improvements. The engine has few operating hours and the boat was validated when it was acquired in 2020. Furthermore, I would use the services of the seller as an intermediary in order to secure the transaction.
